

# FlyingHand Percussion

HandHeldSound.com

## Quick Installation guide -

This version of FlyingHand Percussion is in Native Instruments' Kontakt 2 format.  
Installation is very simple -

- Insert DVD #1 and copy its entire contents to the desired location on your hard drive. Be sure to simply copy the contents keeping the folders hierarchy and naming the same as the original.
- After copying the first DVD proceed to the other DVD's.  
Copy the contents of each of the DVD's to the **'Instruments'** folder already created after copying the first DVD.
- The Instruments in FlyingHand Percussion are built as Monolith .NKI files.  
This means that all the sampled data associated with the instruments is already encapsulated within each instrument file.

You're ready to go!

Enjoy the Instruments.
